Exercise

Write pseudocode (for an algorithm) to get two numbers from the user (dividend and divisor), check that the divisor number is not zero, and display their quotient if the divisor is not zero

Working

```
1. DISPLAY "Division Calculator"
2. PROMPT the user to enter var_num1
3. GET var_num1
4. PROMPT the user to enter var_num2
5. GET var_num2
6. IF (var_num2 != 0)
    SET var_quotient = var_num1 / var_num2
    DISPLAY "var_quotient"
ELSE
    DISPLAY "Cannot divide by 0"
```
